                                                                                                                                                                                                                                                                                                                          The residue S1 is attached Ac and to residue T17 NH2.

This peptide is an example of a highly generic sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAR05469 standard; protein; 17 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Glu116 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Glu115 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents a specifically claimed TNF-alpha peptide from the present invention.
                                                                                                                                                                                                                                                                                                                                                           To residue S1 is attached
                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Page 7; 16pp; German.

  Tumour necrosis factor derived peptide.
                                                       23-OCT-1990
                                                                                                                                AAR05513 standard; protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Glul16 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Glul15 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema a specifically claimed TNF-alpha circularised peptide from the presents of the present of the 
                                                                                                   AAR05513;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-AUG-1998;

                                                                                                                                                                                                                                                                               G= H or an amino protecting group;

Z= OH, NH2 or carboxy protecting group; or G and Z together are a covalent bond or the gp. CO(CH2)aNH; a=1-12;

R, U, V and W= peptide chains of 1-4 naturally occuring alpha aminoacids; 4-inidazoly-methyl or (CH2)bT; b=1-6;

T= OH, MeO, MeS, isopropyl, phenyl (opt. 4-OH, substd.), HS, NH2, COOH, MeO, MeS, isopropyl, phenyl (opt. 4-OH, substd.), HS, NH2, COOH, CONH2, or NH2 C (NH) NH; or M ans Q together are (CH2)c-S-S-(CH2)d, (CH2)eCO NH-(CH2)f or (CH)beNH CO(CH2)gNH CO(CH2) f; c and d=1-4; e and f=1-6; g=1-12.

The peptide is a low mol. wt. deriv. of TNF.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The amino acid sequence of a part of the 4th exon from the tumour necrosis factor (TNF)-alpha. The protein has the peptide AAR72454 attached to the N-terminal amino acid. The fusion protein can be used in pharmaceutical compositions for inhibiting metastasis.

DNA sequence encoding hTNF was synthesised chemically and inserted into vector plasmid. Recombinant plasmid was cut with restriction enzyme and DNA fragment coding for new bioactive polypeptide was obtd. The new bioactive polypeptide has ten N-terminal AAs deleted. It has antitumour activity greater than hTNF and can be produced by culturing bacteria transformed with a plasmid contg. DNA encoding the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New biologically active polypeptide has cytotoxic activity specifically for tumour cells and, therefore, is expected to be used as an anticancer drug. It is derived from human TuF by deleting 11 N-terminal AAs. (See also J63188396, AAN81624 and AAP81236).
                                                                                                                                                                                                                                                                                                                                                                                       Claim 2(1); Page 761; 20pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a formulation comprising Apo-2 ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                                 mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura
                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to Tumour necrosis factor (TNF) and ApoL-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. Th invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B
                                                                                                                                  useful in diagnostic assays.
The present sequence is a C-terminal region of human Tumour necrosis factor (TMF) which has 20-25% sequence identity with C-terminal region human TALL-1 protein extracellular domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lymphocyte autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Region
                                                                                      Sequence
                                                                                                                                                                                                                    post-streptococcal glomerulonephritis, or polyarteritis nodosa.

                                                                                                                                     The mutant of tumour necrosis factor (TNF) is constructed by modifying the sequence of human TNF and deleting 7 N-terminal amino acids. The mutant has activity 2.8 times that of human TNF. It is expressed using expression vector pTNF 416 in E.coli. The cells are then cultured to give the mutant in an amt. of 15.5% of total proteins. The antitumour activity of this protein was measured using mouse L-929 fibroblast cells. 100 microlitres of E.coli lysate contg. 0.0006 units had specific activity of the mutant of 0.000088 units/mg.
                                                                                                                 Sequence

The resulting fragment was then ligated to a synthetic DNA adapter and inserted into an expression vector for prodn. of the polypeptide which has tumoricidal activity. The N-terminal may have up to three residues deleted resulting in N-terminals of: Met-Ser-Asp-Lys,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tumour necrosis factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TNF-derived polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tumoricidal polypeptide(s) - are prepd. by cleaving specified DNA with pertinent restriction enzyme(s) and bonding with conventional synthetic DNA adaptor.

It can also act synergistically with interfic; Comment: TNF-alpha and -beta (lymphotoxin) are the products of different ut are produced by different cell types and have different induction kinet.

It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin 1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell

Submitted (XXX-1993) to the EMBL/GenBank/DBJ databases.
-!- FUNCTION: Cytokine that binds to TNPRSFIA/TNFR1 and
-NPRSFIB/TNFBR. It is mainly secreted by macrophages and can
induce cell death of certain tumor cell lines. It is potent
pyrogen causing fever by direct action or by stimulation of
interleukin 1 secretion and is implicated in the induction of
cachexia, Under certain conditions it can stimulate cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDIINE-91016860; PubMed-2216740;

J. Biol. Chem. 273:2153-2160(1998).
-i- FUNCTION: Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. It is mainly secreted by macrophages and ca induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or bys stimulation of interleukin 1 secretion and is implicated in the induction cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proliferation and induce cell differentiation.
SUBUNIT: Homotrimer (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein. Also exists
extracellular soluble form (By similarity).
PTM: The soluble form derives from the membrane form by
                                                                                                                                                                                                                                                                                               European Bioinformatics Institute.
                                                                                                                                                                                                                                                                                                                                                                                                                                    proteolytic processing (By similarity).

PTM: The membrane form, but not the Soluble form, is phosphorylated on serine residues. Dephosphorylation of the membrane form ocurrs by binding to soluble TNFRSF1A/TNFR1
                                                                                                                                                                                                                                                                                                                                                             SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                          CANCER AND INFECTION, AND AND MALNUTRITION.

SUBUNIT: Homotrimer (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein. Also exist extracellular soluble form (By similarity).
PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
PTM: The membrane form, but not the soluble form, is phosphorylated on serine residues. Dephosphorylation of th membrane form occurs by binding to soluble TNFRSF1A/TNFR1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pyrogen causing fever by direct action or by stimulation of interleukin 1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. It is mainly secreted by macrophages induce cell death of certain tumor cell lines. It is
                                                                                                                                                                                                                                                                                                  AND MALNUTRITION. SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 QRETPEGAEAKPWY 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pyrogen causing fever by direct action or by stimulation of interleukin 1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation.

SUBUNIT: Homotrimer (By similarity).

SUBCELLULAR LOCATION: Type II membrane protein. Also exists as extracellular soluble form (By similarity).

PTM: The soluble form derives from the membrane form by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               . Immunol. 34:1041-1042(1997).

FUNCTION: Cytokine that binds to TNERSFIA/TNFR1 and TNERSFIB/TNFBR. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent induce cell death of the transfer of the etimological section of the secretary of the secr
SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                    Similarity).
DISEASE: CACCEXIA ACCOMPANIES A VARIETY OF CANCER AND INFECTION, AND IS CHARACTERIZED
                                                                                                                                                                                                                                                                                                                            proteolytic processing (By similarity).

PTM: The membrane form, but not the soluble form, is phosphorylated on serine residues. Dephosphorylation
                                                                                                                                                                                                                                                                              membrane form ocurrs by binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 QRETPEGAEAKPWY 14
                                                                                                               FUNCTION: Cytokine that binds to TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin 1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation.

SUBCELLULAR LOCATION: Type II membrane protein. Also exists as extracellular soluble form (By similarity).
                                     phosphorylated on serine residues. Dephosphorylation of the membrane form ocurrs by binding to soluble TNFRSFLA/TNFR1 (
                                                                             proteolytic processing (By similarity).
PTM: The membrane form, but not the soluble form,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QRETPEGAEAKPWY 191

"Molecular cloning and functional characterization of bottlenose
dolphin (Tursiops truncatus) tumor necrosis factor alpha.";

Vet. Immunol. Immunopathol. 82:183-192(2001)
-!- FUNCTION: Cytokine that binds to TNFRSF1A/TNFR1 and
TNFRSF1A/TNFBR. It is mainly secreted by macrophages and can
induce cell death of certain tumor cell lines. It is potent
pyrogen causing fever by direct action or by stimulation of
interleukin 1 secretion and is implicated in the induction of
cachexia, Under certain conditions it can stimulate cell
profit forestion and is implicated in the induction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUN-2002 (Rel. 41, Created)
